

Saicharitha Reddypalli

Software Engineer – Backend

9346376456 | Bengaluru, Karnataka | saicharitha1210@gmail.com
github.com/Charitha1210 | linkedin.com/in/sai-charitha-131848274

Backend Software Engineer with 2 years of experience designing and building scalable backend systems using Java and Spring Boot. Experienced in microservices architecture, distributed systems, and RESTful API development with event-driven communication using Apache Kafka. Skilled in building reliable backend services, improving system performance, and deploying cloud-native applications using Docker, Kubernetes, and Azure.

SKILLS

Programming Languages	Java, Python (Basic), C (Basic)
Backend Development	Spring Boot, RESTful APIs, Microservices Architecture, Object-Oriented Programming, Event-Driven Systems, Distributed Systems, Data Structures, Algorithms
Messaging and Databases	Apache Kafka, MySQL, Relational Databases
Cloud and DevOps	Docker, Kubernetes, Microsoft Azure
Tools and Testing	Git, Maven, IntelliJ IDEA, Jira, Postman, Unit Testing, Integration Testing

TECHNICAL EXPERIENCE

Associate Software Engineer <i>OneTrust</i>	October 2024 — March 2026 <i>Bengaluru, Karnataka</i>
- Built scalable backend microservices using Java and Spring Boot for the Vendor Risk Management platform, reducing duplicate code across services by approximately 20% through reusable shared components. - Integrated Attribute-Based Access Control (ABAC) across backend APIs, standardizing authorization logic and improving permission consistency across multiple services. - Established Kafka-based event-driven communication between microservices, enabling asynchronous processing and improving system scalability for high-volume operations. - Created and maintained RESTful APIs used by internal services and client-facing applications, improving backend maintainability and API consistency. - Resolved 15+ production issues across multiple backend services, reducing recurring service errors and improving overall platform stability. - Strengthened application reliability by introducing unit and integration tests, increasing backend code coverage to approximately 75% and supporting stable production deployments.	
Intern - Backend Developer <i>OneTrust</i>	February 2024 — August 2024 <i>Bengaluru, Karnataka</i>
- Supported development of Java Spring Boot microservices and REST APIs used by internal backend systems. - Investigated and fixed more than 10 backend bugs and service issues, improving application stability and reducing production defects. - Assisted in writing unit tests and participating in code reviews, improving code quality and maintainability across the service layer.	

PROJECTS

Full Stack CRUD Application - Spring Boot, Angular, MySQL
- Built a full-stack web application using Spring Boot REST APIs and Angular frontend to support CRUD operations and seamless client-server communication. - Integrated MySQL database using Spring Data JPA and structured modular REST endpoints for efficient data management and maintainable backend architecture.
Laundry Management System – Java, MySQL
- Engineered a backend application to manage laundry orders, customer records, and billing workflows using Java and MySQL. - Modeled relational database schema and optimized SQL queries to improve data retrieval efficiency and ensure reliable order processing.

EDUCATION

Bachelor of Engineering - Computer Science, NIE Institute of Technology	2020 - 2024
