EDUCATION

B.E. Computer Science & Engineering

Sri Jayachamarajendra College of

Engineering, Mysuru

CGPA: 9.61

2015-2019

TECHNICAL SKILLS

- **Languages:** Java, SQL
- **Backend:** Spring Boot, REST APIs, Microservices
- **Messaging:** Kafka, AMQ
- **Databases:** MSSQL, MongoDB, Redis
- **Cloud:** Kubernetes, Azure
- **Monitoring:** Datadog, Kibana
- **Tools:** Git, GitLab, Jenkins, Maven, OpenLens, Postman
- **Testing:** JUnit, Cucumber, Selenium

LEADERSHIP

- **APAC Regional Lead - Women@OneTrust**
Organized regional events and speaker sessions focused on women's leadership and career development.
- **Volunteer Teacher — Make a Difference (NGO).**
Taught and mentored underprivileged students, helping improve their academic performance through structured learning sessions and guidance.

SUMMARY

Senior Backend Engineer with **6+ years** of experience building scalable **Java microservices** and event-driven systems using **Spring Boot**. Strong background in backend platforms supporting enterprise privacy workflows, with expertise in production debugging, integrations, and performance optimization.

EXPERIENCE

Jul 2019 - Present

Senior Software Engineer / OneTrust Privacy Management Software

- Built backend services for the **Data Subject Access Rights (DSAR)** platform, enabling enterprises to process privacy requests (data access, deletion, rectification) through configurable workflows across multiple tenants.
- Implemented APIs and business logic for **DSAR request lifecycle management**, enabling reliable handling of request creation, validation, workflow assignment, and response processing for compliance operations.
- Designed and implemented **Kafka-based event workflows** to enable asynchronous processing and decoupling inter-service operations, improving reliability and scalability of DSAR request execution.
- Built services for **Global Audit V2 migration**, ingesting and processing encrypted audit logs from Azure Blob Storage, enabling scalable audit data processing for downstream reporting workflows.
- Implemented backend components supporting **integrations with external systems** using REST APIs, webhooks, and client-credential authentication, enabling automated cross-system data operations.
- Investigated and resolved **production incidents** by analyzing logs and service metrics using Datadog and Kibana, performing root cause analysis across distributed services to restore system stability.
- Integrated **Redis caching** for frequently accessed DSAR APIs, reducing database load and improving response latency for high-frequency requests.
- Maintained and upgraded application dependencies, including **libraries and frameworks**, addressing security vulnerabilities and ensuring compliance with internal security standards.
- Leveraged **AI-assisted development tools** to improve debugging efficiency, accelerate code comprehension, and explore implementation approaches during backend development.
- **Mentored junior engineers** in debugging production issues and understanding DSAR workflows, helping them ramp up on backend services and contribute to feature development.
